DETAILED ACTION

Specification

A substitute specification is required pursuant to 37 CFR 1.125(a) because the multiple corrections specified by pre amendment A makes it difficult for one to easily read and understand the content of the specification without confusion.

A substitute specification filed under 37 CFR 1.125(a) must only contain subject matter from the original specification and any previously entered amendment under 37 CFR 1.121. If the substitute specification contains additional subject matter not of record, the substitute specification must be filed under 37 CFR 1.125(b) and must be accompanied by: 1) a statement that the substitute specification contains no new matter; and 2) a marked-up copy showing the amendments to be made via the substitute specification relative to the specification at the time the substitute specification is filed.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 11-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: lines 3-13 of the claim describe an apparatus for splitting an initial

beam of light and then modulating it in various ways. Starting at line 14, the applicant describes "a measuring probe for dividing the short time coherent broad-band beam" This makes no logical sense, as the light as previously described has been appropriately modulated, and this line makes reference to the probe only receiving the initial light beam generated by the light sources.

In addition, in lines 18-20 of the claim, the term "optical wavelength" is used as a difference that is compensated for by the measuring probe in order to generate interference within the system. However, the specification and dependent claims correctly depict the optical path length as what is being compensated for.

It should be noted that while all the claims pending in the case have been rejected under this statute, no prior art has been found that the claims read upon. Overcoming the rejections stated above can lead to allowance of the pending claims.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
